

## Rebound Boards for 5-side Football Pitches

**Rebound boards** to 1.2m high are commonly installed on 5-a-side pitches to provide high quality and consistent rebound characteristics. They are constructed from durable, wear-resistant plywood with a smooth, tough, elastic polypropylene coating which protects the plywood against moisture penetration and gives good chemical and UV resistance to minimise colour fade in changing weather conditions.

Boards come in various thickness and colours and are easy to clean with water and detergent, Prestige Civils and Sports take their environmental responsibilities very seriously and our preferred boards do not contain any chlorine derivatives in keeping with our environmental policy.

Close gauge weld mesh panels are another durable rebound option. They are useful for noise reduction (can help planning applications) and pitch visibility.

Suspended nets are often hung above the boards to ensure balls remain within the area of the pitch and do not interfere with adjacent activities.
